

HEALTH CARE SECTOR

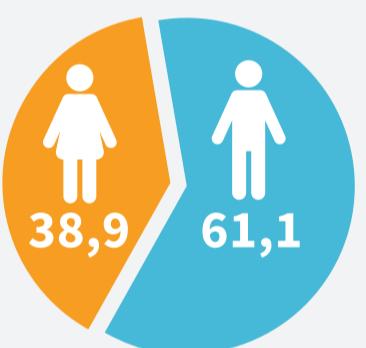

Practical example of GRB implementation in Vinnytsya oblast

Program

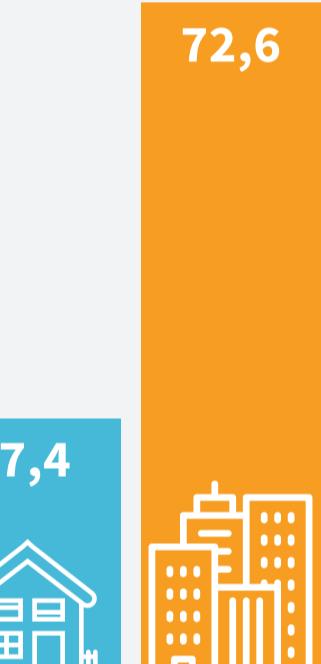

The “Future of Vinnytsya in the Preservation of Health of Citizens” program for 2016-2020 as part of “Counter-acting HIV Infection and AIDS” and the regional program for the prevention, diagnosis and treatment of hepatitis B and C in the Vinnytsya oblast for 2014-2016.

People who received counseling and testing for HIV/AIDS, %

People who have viral hepatitis, %

Rate of rural and city population among registered patients, %

Gender gaps

Prevalence of women (62%) among those who received counseling and testing for HIV/AIDS during 2015-2016, in comparison to men (38%). It stands in contrast to the fact that there are more men (61.1%) who have viral hepatitis, compared to the number of women (38.9%).

Dominance of patients (72.6%) registered for treatment from cities. It might be a result of inaccessibility to treatment and scanning services for the rural population.

The gender pattern between urban and rural populations is not known.

”

“When we opened the nursery in the clinic, visiting the Center and undergo treatment became more comfortable for our patients and their families. This would not be possible without gender-responsive analysis and budgeting. Due to the appropriate decision and allocation of funds, we are now preparing everything for our mobile outpatient clinic, which will help us to better serve the rural areas of our region”.

Igor Matkovsky,

Director of the Vinnytsya Oblast Clinical Center for AIDS Prevention and Control.

Recommendations:

- to increase access to medical service for mothers with small children, open a nursery in the “Vinnytsya Oblast Clinical Center for AIDS Prevention” municipal institution to care for children during mothers and fathers’ medical appointments;
- to make recommendations for increasing fundings from the regional budget in 2017 for the purchase of test systems and rapid tests for HIV, sexually transmitted infections and hepatitis;
- to allocate fundings from the regional budget for 2018 for the purchase and provision of tools of a specialized mobile clinic for the “Vinnytsya Oblast Clinical Center for AIDS Prevention and Control” municipal institution to undertake screening of both urban and rural populations in the region regarding HIV infection, viral hepatitis B and C, as well as sexually transmitted diseases.

Results

UAH 1.5 million was allocated for the purchase of a mobile laboratory for the Vinnytsya Oblast Clinical Center for AIDS Prevention and Control. The institution will begin bidding procedures for its purchase in the near future;

in addition, about UAH 200 thousand was allocated to the regional budget for the purchase of test systems and rapid tests, as well as for treatment of hepatitis B and C in patients with HIV and AIDS;

A nursery is already functioning in the children's department of the Vinnytsya Oblast Clinical Center for AIDS Prevention and Control, for which over UAH 60 thousand were allocated in 2017.

In 2017 some performance indicators were included in the product indicators, efficiency and quality of passports of budget programs in accordance with the program-target method and in one regional program
